

Get into STEM

Early Years - Key Stage 1 Kit

Delivered by

North East Ambition Primary Programme Partners with Esh Group to Champion STEM Careers

The North East Combined Authority's North East Ambition Programme, together with [Esh Group](#), are delighted to be providing six additional Get into STEM Kits to support a wider understanding of STEM-related construction careers for EYFS and Key Stage 1 pupils across the North East.

The Kits will be hosted at six Career Champions' schools across the Network providing coverage to schools in all North East Local Authority Areas and will be available to schools to book out and use in a variety of ways including in curriculum delivery, extra-curricular sessions and wider careers related learning activities.

Each Kit contains bright and vibrant resources such as foam bricks, measuring equipment, literature and personal protective equipment designed to be used flexibly or by following accompanying workshop/ lesson plans.

Chloe Fletcher, Newcastle based Career Champion at Walkergate Community School shared "We utilised the Esh Get into STEM Kit with our Year 1 and Year 2 pupils who engaged extremely well with the equipment, literature and activities suggested in the Kit. The Kit is self-contained and comes with an easy to follow session plan which can be adapted or extended to meet the needs of a range of pupils.

There are opportunities for cross-curriculum links and it has complemented our existing careers programme helping to implement activities contributing to our progress against the Primary Benchmarks including Benchmark 2, Learning from Labour Market Information, Benchmark 4, Careers in the Curriculum and Benchmark 5, Encounters with Employers.

We are delighted to be one of six schools across the North East hosting the Get into STEM Kits to support more children to explore careers in construction and wider STEM related sectors."

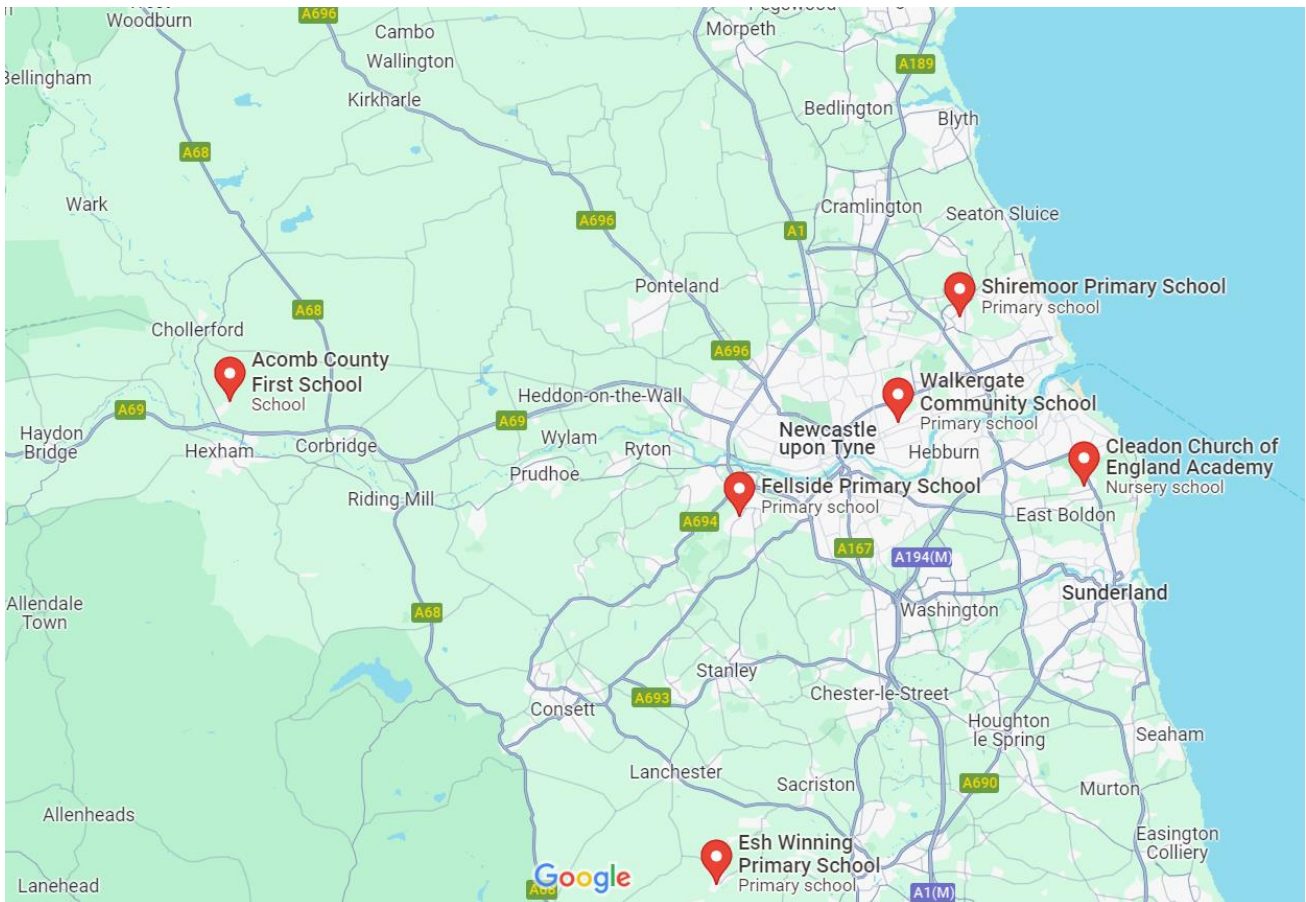

Councillor Tracey Dixon, North East Combined Authority Cabinet member for Education, Inclusion and Skills, said "This STEM kit rollout will support our work delivering careers related learning for primary schools. The kit will help challenge gender stereotyping, support numeracy and literacy, and give children a chance to learn about different progression pathways that are available for them in the future, including apprenticeships and T Levels."
